## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-58 are rejected under 35 U.S.C. 102(b) as being anticipated by D'Amico et al. (US 5,606,729).

Regarding claims 1 and 49, D'Amico discloses a system and method of measuring noise at one or more base stations 116 in a mobile communication system (see FIG. 1), including defining a periodic silence period for at least one carrier that is independent of reverse link channel frame boundaries; transmitting silence parameters that define the periodic silence period to mobile stations communicating with the base stations, wherein the mobile stations 122 stop transmitting during the periodic silence period; and measuring the noise at each base station during the periodic silence periods. See col. 1, line 55 – col. 2, line 12.

Regarding claims 2, D'Amico discloses that the silence parameters include a frequency parameter that indicates the frequency of the silence period, a duration parameter that indicates the duration of the silence period, and a time reference parameter that provides an absolute time reference for synchronizing silence periods for non-synchronous reverse link channels. See col. 6, lines 1-19.

Regarding claims 3, D'Amico discloses that the periodic silence period encompasses portions of at least two consecutive reverse link frames. See col. 6, lines 27-42.

Regarding claims 4, D'Amico discloses that measuring the noise at each base station during the periodic silence periods includes measuring the power of the noise during the periodic silence period. See col. 5, lines 2-17.

Regarding claims 5, D'Amico discloses that the noise includes adjacent carrier interference. See col. 7, lines 10-25.

Regarding claims 6, D'Amico discloses that the mobile communication system is a multicarrier system and wherein the periodic silence period is defined for at least one carrier. See col. 5, lines 55-67.

Regarding claims 7, D'Amico discloses including assigning a first group of mobile stations to a first carrier with a periodic silence period; and assigning a second group of mobile stations to a second carrier without a periodic silence period. See col. 8, lines 7-24.

Regarding claims 8, D'Amico discloses that the periodic silence period is defined for a plurality of carriers. See col. 8, lines 25-39.

Regarding claims 9, D'Amico discloses that the periodic silence period is synchronized for two or more carriers. See col. 1, line 55 – col. 2, line 12.

Regarding claims 10, D'Amico discloses that the periodic silence period is defined for all carriers. See col. 8, lines 25-39.

Regarding claims 11, D'Amico discloses that the periodic silence period is synchronized for all carriers. See col. 1, line 55 – col. 2, line 12.

Regarding claims 12, D'Amico discloses including causing legacy mobile stations that do not recognize silence periods to stop transmitting on the reverse link during a silence period. See col. 9, lines 10-27.

Regarding claims 13 and 53, D'Amico discloses that causing legacy mobile stations that do not recognize silence periods to stop transmitting on the reverse link during a silence period includes directing the legacy mobile stations to a dummy carrier during the silence period. See col. 9, lines 10-37.

Regarding claims 14 and 54, D'Amico discloses that causing legacy mobile stations that do not recognize silence periods to stop transmitting on the reverse link during a silence period includes directing the legacy mobile stations to perform a candidate frequency search on a different carrier during the silence period. See col. 9, lines 39-52.

Regarding claims 15 and 55, D'Amico discloses that the duration of the silence period is at least one frame. See col. 8, lines 7-24.

Regarding claims 16, D'Amico discloses that the duration of the silence period is less than one frame. See col. 8, lines 25-39.

Regarding claims 17, D'Amico discloses including suspending transmission of power control commands on a forward link power control channel during the silence period. See col. 1, line 55 – col. 2, line 12.

Claims 18-34 correspond to claims 1-17, respectively, and are therefore rejected for the same reasons as those claims.

Claims 35-41 correspond to claims 1-3 and 15-17, respectively, and are therefore rejected for the same reasons as those claims.

Claims 42-48 correspond to claims 1, 3-6, 15 and 16, respectively, and are therefore rejected for the same reasons as those claims.

Regarding claims 50 and 56, D'Amico discloses that controlling a transmitter responsive to the determination whether a frame overlaps a silence period includes transmitting a first part of the frame; suspending transmission of the frame during the silence period, and transmitting a second part of the frame following the silence period. See col. 9, lines 10-24.

Regarding claims 51 and 57, D'Amico discloses that controlling a transmitter responsive to the determination whether a frame overlaps a silence period includes delaying transmission of a frame if the frame overlaps a silence period, and transmitting the delayed frame following the silence period. See col. 12, lines 14-33.

Regarding claims 52 and 58, D'Amico discloses that controlling a transmitter responsive to the determination whether a frame overlaps a silence period includes erasing a frame if the frame overlaps a silence period. See col. 12, lines 34-56.

## Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bobick (US 5,987,320) discloses testing apparatus for voice quality.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sam Bhattacharya whose telephone number is (571) 272-7917. The examiner can normally be reached on Weekdays, 9-6, with first Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on (571) 272-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
